The soil is acidic in nature and irrigation facilities are inadequate. Only 12% in Kharif season and 6-8% area in Rabi season is irrigated. The average annual rainfall of the state is 1280mm but 80% of it is received in a span of 100 days during monsoon. The main crops of Jharkhand state are paddy, maize, wheat, pulses, oilseeds, potato and vegetables.

According to the 55th round of National Sample Survey Organization (NSSO), 10.46% of all households in Jharkhand faces seasonal food insecurity and 2.5% of the households face chronic food shortage. In view of the fact, that the area under cultivation is unlikely to increase significantly, thrust will have to be on raising productivity per unit of cultivated land.

Seed is the basic input on which the performance of other input factors depend. "Seed" is the basic input for increasing the productivity and production of the crops in the state. In order to empower the farmers, government provides certified seeds to farmers at subsidized rates in order to meet the local seed requirement. The government endeavours to undertake timely supply of seeds to the farmers in order to achieve better seed replacement rate.
